

Cabinet testing – information for RD&T customers

- ✓ Design
- ✓ Develop
- ✓ Test

Book the test

Contact us and ask for a quote for your testing. We supply fixed price quotations but we do add a charge if we need to do extra work that is not within the quotation. These additional costs are detailed in the quotation. Full details of the sections of the relevant test standard we will test to are detailed in Appendix 2 of the quotation.

Schedule the test

In the quotation we will provide you with a date when the test can be carried out. This is the availability on the day that the quote is issued. We only book a cabinet into our test rooms once we have a PO for the work. Once we have a PO we will re-confirm the test date and agree with you when you will deliver the cabinet to us.

Send us your cabinet

Please send us your cabinet 1-2 weeks before the test is scheduled. This enables us to check the cabinet and make sure that any queries are dealt with before the cabinet begins its test.

Please make sure that:

1. The cabinet controller is pre-set at the settings you want applied in the test.
2. You provide full details of the cabinet controller operation.
3. You provide safety information if the cabinet operates on a hydrocarbon or A2L refrigerant.
4. If you wish us to adjust the cabinet controller set point(s) that you give us the authority to do so.
5. The cabinet is fully wired up to a plug and the controller wired ready for use.
6. Full details of all testing requirements are provided in the T&S section of the quotation.

Before the test

Please make sure you have paid us for the work, we only put cabinets into the test room once we have received payment.

During the test

We will keep you informed of progress and how your cabinet is performing. If we think that the cabinet controller settings need to be adjusted we will let you know that we are making adjustments. We will only make adjustments if you have given us the authority to do so.

After the test

We will provide you with a test report detailing the performance of the cabinet. This will be in the form of a pdf file that will be e-mailed to you.

Feedback

We will ask you for feedback after the test is completed. Please let us have your comments as we are always striving to improve what we offer customers!
